

HTML Images - Practice Problem

Based on: Bro Code - "Learn HTML images in 6 minutes!"

Task

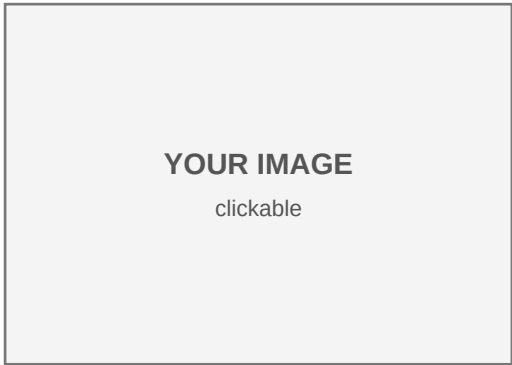

Create one simple HTML page that displays a local image and uses the image features shown in the video. The image should also work as a clickable link.

Checklist

- ☐ Use an image stored in your project.
- ☐ Display the image on the page.
- ☐ Use the correct image source/path.
- ☐ Set the image height.
- ☐ Add alternate text for the image.
- ☐ Add hover/title text to the image.
- ☐ Make the image clickable by linking it to another webpage.

Expected output

Browser

- Image appears at the set height.
- Hovering shows the title text.
- Clicking the image opens the link.
- If the image cannot load, the alt text is available.

No CSS or extra features are required for this practice.
