Topic: HTML5 Audio Implementation

76%

GRADE: B

CHECKLIST BREAKDOWN

Requirement	Status	Evaluation & Observations
Audio Element	PASS	Correctly instantiated using the <audio> element.
Native Controls	PASS	controls attribute is properly present.
Playback Attributes	PASS	autoplay, muted, and loop attributes correctly applied.
Source Configuration	NEEDS FIX	Used nested <source> tag, but MIME type is set to audio/mp3 instead of standard audio/mpeg. Directory name has a typo (assests).
Multiple Formats	MISSING	Only 1 audio source (MP3) provided. Video demonstrates adding alternative sources (e.g., .wav or .ogg) for browser compatibility.
Fallback Content	MISSING	No fallback text provided inside the <audio> tag to display if a browser lacks HTML5 audio support.

KEY FEEDBACK & IMPROVEMENTS

Items to Correct for Full Marks (100%):

- Standardize MIME Type:** Change type="audio/mp3" to type="audio/mpeg" on the MP3 source tag.
- Add Multiple Audio Formats:** Include a secondary <source> tag with a .wav or .ogg file as shown in the tutorial to ensure maximum cross-browser compatibility.
- Add Fallback Text:** Insert fallback plain text (e.g., "This browser does not support HTML5 audio") inside the <audio> tag before the closing </audio> tag.
- Check Path Spelling:** Verify the folder path spelling (currently assests/ instead of assets/).
