

HTML Hyperlinks Implementation

Topic based on tutorial: "Learn HTML hyperlinks in 4 minutes"

Goal: Build a simple HTML page containing a resource hub that meets all requirements below. Submit your output once completed.

EXPECTED RENDERED OUTPUT

 Browser Preview — My Portal Page

Developer Quick Resources

Search the web: [Google](#)

Learn coding: [YouTube](#)

Local pages: [About Me](#) | [My Projects](#)

Need help? [Email Support](#)

SUBMISSION CHECKLIST

- ☐ **Absolute Hyperlink:** Create a link pointing to an external website (e.g., `https://www.google.com`) using full URL syntax.
- ☐ **Target Attribute:** Configure at least one hyperlink to open in a new browser tab/window using the `target="_blank"` attribute.
- ☐ **Title Attribute (Tooltip):** Add a title attribute to a hyperlink so hover text (tooltip) displays when hovering over the link.
- ☐ **Relative Hyperlinks:** Create links pointing to local HTML files within the same directory (e.g., `about.html` and `projects.html`).
- ☐ **Mailto Link:** Create an email link using the `mailto:` protocol scheme inside the `href` attribute (e.g., `mailto:support@example.com`).
- ☐ **Correct Anchor Element Usage:** Ensure all clickable elements use valid opening `<a>` and closing `</a>` tags with appropriate text labels.
